

A dark blue rectangular card with a lighter blue circular gradient in the background. The text "Note-taking app" is centered in white.

Note-taking app

- Develop a note-taking app where users can create, edit and delete notes.
- Serialize notes into JSON format for storage.
- Give an easy and/or an automatic way to store notes. The user should be able to change the content of the notes.
- Upon page reload, retrieve all notes from localStorage and display them.
- Include the option to delete notes.
- Style the page. Make sure that the page scales reasonably well when resizing the browser window.
- Use basic error handling to make sure that everything works without errors, even with bad user input.
- You can add extra functionality such as undo or anything you think could be useful or interesting.
